Title

Accompanying calculations for 'THE LIMITS OF RICARDIAN VALUE: LAW, CONTINGENCY AND MOTION IN ECONOMICS'

Submitted to the 1999 mini-conference of the IWGVT at the EEA

These calculations aim to show, in the most user-friendly form I could manage, how I calculated the calculations that are referred to in the text of this article.

To help the reader I have made liberal use of the 'comment' facility which Excel provides

Commented cells have a little red corner on the top right.

You can see them in one of two ways. Either drift the mouse over any such cell and the comment will appear. Or, having so positioned the mouse, right-click and from the pop-up context menu choose 'show comments'. If you choose the second method and the comments get in the way of the calculations, you can always hide them. Or, you can drag them to another part of the screen
